

Apollo Client now includes three hooks that you can drop into your app, anywhere you currently use a corresponding higher-order component or render prop component: **useQuery**, **useMutation**, and **useSubscription**.

```
import { useQuery } from '@apollo/react-hooks';

const Home = () => {
  const { data: { photos }, loading, error } = useQuery(GET_PHOTOS_QUERY);

  if (loading) return <Loading />;
  if (error) return <Error error={error} />;
  return <PhotoList photos={photos} />;
};
```
