Defining a resolver

```javascript
const resolvers = {
  Query: {
    personById: async (_, { id }) => await findById(id);
  },
};
```

Sample Query Implementation

```
const typeDefs = `
type Query {
   personById(id: Int) : Person!
}

type Person {
   id: ID!
   name: String!
   age: Int!
   posts: [Post!]!
}
`;
```
